

## Supplementary material

Table 1: Data Dictionary with variables considered in the attributes analysis, including measurement units, allowed values, definitions and/or references.

Variable	Measurement units	Allowed values	Description
ID	Numeric	-	ID number assigned to the piece.
Raw material	-	Chert, Quartz, Greywacke, Chalcedony, Schist, Silcrete, Dolerite, Other.	Type of raw material of the piece.
Quartz quality	-	Coarse, Medium, Fine, Rock crystal.	Type of grain and quality of quartz. Coarse quality: large and visible grains (>0.5 mm). Medium quality: small visible grains. Fine quality: absence of visible grains. Rock crystal: absence of visible grains and transparent coloration.
Class	-	Blank, Blank fragment, Retouched piece, Retouched piece fragment, Core, Core fragment, Core preparation product, Core preparation product fragment, Burin spall, Thinn flake, Thinn flake fragment, Anvil, Hammer, Manuport, Shatter, Chip, Crested piece, Core trim, Core tablet, Core front.	Technological class of the piece. According to Andrefsky (1998), Bicho (2011), Debenath and Dibble (1994), Inizan et al. (1999).
Core preparation product	-		Type of core preparation product. According to Inizan et al. (1999).
Retouched piece blank	-	Flake, Elonged blank, Shatter, Other, Indeterminate.	Type of retouched piece blank. According to Inizan et al (1999).
Piece completeness	-	Proximal, Distal, Other.	Part of the piece that is present. Proximal refers to the part which has a bulb and a striking platform; distal is the end of the piece; other refers to mesial.
Cortex	-	0%, 1-30%, 31-60%, 61-99%, 100%.	Percentage of cortex presence in the dorsal face of the piece. According to Andrefsky (2005, pp. 104-105) and Bicho (2011).
Cortex location	-	Proximal, Distal, Mesial, Left lateral, Right lateral, Proximal left lateral, Proximal right lateral, Distal left lateral, Distal right lateral, Mesial left lateral, Mesial right lateral.	Location of cortex in the dorsal surface of the piece.
Cortex type	-	Cobble, Outcrop, Indeterminate.	Type of cortex present on the piece. Cobble refers to rounded clasts of rock; Outcrop is an exposed bedrock or superficial deposits.
Platform type	-	Plain, Dihedral, Faceted, Punctiform, Linear, Winged, Removed, Crushed, Other.	Type of platform. According to Inizan et al (1999, pp. 136).

Table 1: Data Dictionary with variables considered in the attributes analysis, including measurement units, allowed values, definitions and/or references. (*continued*)

Variable	Measurement units	Allowed values	Description
Platform cortex	-	No, Yes complete, Yes partial.	Presence of cortex on the platform.
Lipping	-	No, Yes.	Presence of a lip on the piece. According to Inizan et al (1999, pp. 144).
Blank shape	-	Parallel, Convergent, Divergent, Biconvex, Irregular, Circular, Dejete, Other.	Type of blank shape. According to Almeida (2000, pp. 107).
Cross section	-	Triangular, Trapezoidal, Quadrangular, Irregular, Lenticular, Other.	Type of cross section of the piece. According to Scerri et al (2015, pp. 19).
Blank tip	-	Feather, Hinge, Step, Overshoot, Pointed.	Type of blank tip. According to Almeida (2000, pp. 106).
Profile	-	Straight, Curved, Twisted, Irregular.	Type of blank profile. According to Almeida (2000, pp. 106).
Scar count	Numeric	NA	Count of dorsal flake scars over 5 mm. According to Andrefsky (2005, pp. 106).
Scar pattern	-	Unidirectional, Bidirectional, Crossed, Sub-centripetal, Centripetal, Other.	Type of scar pattern on the dorsal surface of the piece. According to Scerri et al (2015, pp. 19).
Thickness	In mm	-	Measurement of piece maximum thickness.
Max width	In mm	-	Measurement of piece maximum width.
Proximal width	In mm	-	Measurement of piece proximal width.
Mesial width	In mm	-	Measurement of piece mesial width.
Distal width	In mm	-	Measurement of piece distal width.
Length	In mm	-	Measurement of piece central length according to the technological axis.
Platform thickness	In mm	-	Measurement of platform central thickness.
Platform width	In mm	-	Measurement of platform central width.
Weight	In grams	-	Weight measurement of piece.
Exterior platform angle	In degrees	-	Measurement of the angle between the platform and the dorsal surface of the piece. According to Dibble (1997).

Table 1: Data Dictionary with variables considered in the attributes analysis, including measurement units, allowed values, definitions and/or references. (*continued*)

Variable	Measurement units	Allowed values	Description
Core type	-	Single platform, Single prismatic, Single pyramidal, Two single platforms, Opposed, Opposed twisted, Other opposed, Orthogonal, Inform, Bipolar, Globular, Centripetal, Discoidal, Levallois, Chopper, Tested, Other.	Type of core. According to Zilhao (1997, pp. 17).
Core Cross Section	-	Circular, Triangular, Quadrangular, Irregular.	Type of core cross section.
Number of core faces	-	One, Two, Three, Four, More than four.	Count of core debitage surfaces.
Core platform	-	Plain, Dihedral, Faceted, Cortical, Crushed, Other.	Type of core platform. According to Inizan et al (1999, pp. 136).
Main face cortex	-	0%, 1-30%, 31-60%, 61-99%.	Percentage of cortex of the main face. Main face refers to the debitage surface with most scars.
Main face scar count	Numeric	-	Count of scars over 5 mm in the main face of the core.
Main face scar direction	-	Unidirectional, Bidirectional opposed, Bidirectional alternate, Crossed, Sub-centripetal, Centripetal, Other.	Direction of scars in the main face of the core. According to Scerri et al (2015, pp. 19).
Main face aris orientation	-	Parallel, Convergent, Indeterminate.	Orientation of main face aris.
Main face scar length	In mm	-	Central length measurement of the last scar, over 5 mm, in the main face of the core.
Main face scar width	In mm	-	Maximum width measurement of the last scar, over 5 mm, in the main face of the core.
Main face platform angle	In degrees	-	Measurement of the angle between the platform and the main face of the core.
Main face core use	-	Flakes, Blades, Bladelets, Points, Mixed.	Type of products extracted from the main face of the core. Distinction of blade and bladelet according to Tixier (1963).
Alteration	-	None, Patinated, Concretion, Fire, Mix.	Type of alteration of the piece. Patina refers to a layer covering the surface of a piece; concretion is a mass of mineral formed around a nucleus.
Fire	-	Burned, Rubefact, Heat treatment.	Type of fire alteration to the piece. According to Inizan et al (1999, pp. 24).

Table 1: Data Dictionary with variables considered in the attributes analysis, including measurement units, allowed values, definitions and/or references. (*continued*)

Variable	Measurement units	Allowed values	Description
Retouched piece typology	-	-	Retouched piece typology as defined by Sonnevile-Bordes and Perrot (1956), adapted by Zilhao (1997) for the Portuguese Estremadura.
Chip quantity	Numeric	-	Count of chips. According to Andrefsky (2005, pp. 12).
Other notes	-	-	NA

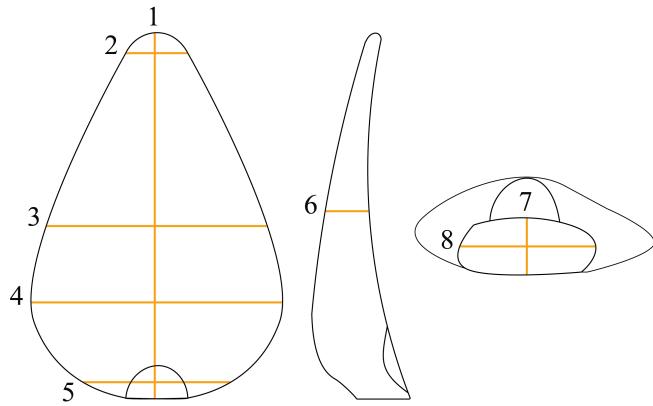

Figure 1: Registered measurements scheme for debitage products and cores. Legend: 1- Maximum length; 2- Distal width; 3- Mesial width; 4- Maximum width; 5- Proximal width; 6- Mesial thickness; 7- Platform thickness; 8- Platform width.

Figure 2: Vale Boi. Location.

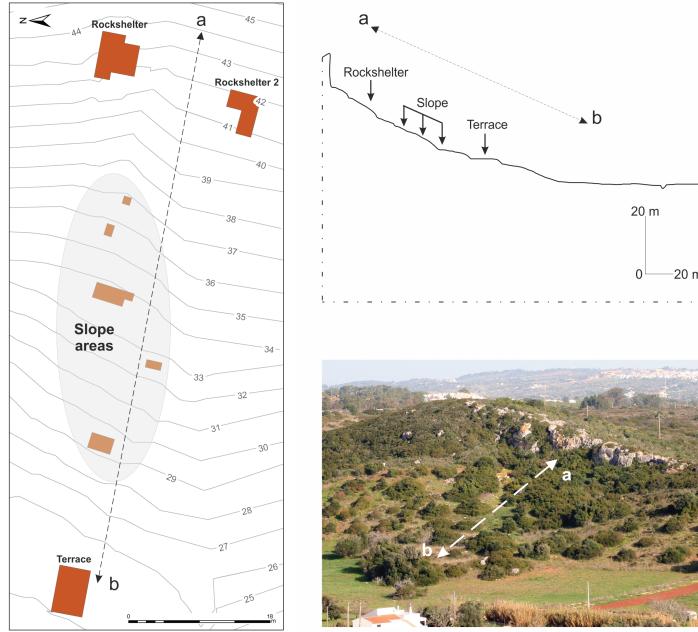

Figure 3: Vale Boi. Topographic plan, schematic profile and general view, with location of the excavation loci. After Cascalheira et al. (2017).

Table 2: Vale Boi. Terrace identified layers with sediment description.

Layer	Description
Layer 1	Reddish dark brown silt/clay matrix sediment, with a granulous texture, possibly disturbed by agricultural processes; ceramics until 30 cm depth, immediately above the transition between layer 1 and 2.
Layer 2	Dark sediment, more compact and with a heavier clay-like component; has a thickness of 25-30 cm and is well preserved; bones and ceramics are often in connection, with restricted spatial distributions; the limestone blocks correlate with the antropical structures dug in 2004; where the level with a Neolithic occupation has been identified.
Layer 3	Silt and clay matrix sediment, with some inclusions, mostly small limestone clasts; this layer is often interrupted by the deposition of levels of clasts with different sizes; presence of lithic artefacts and fauna is constant in all of the deposit, though it is possible to identify two different cultural horizons: Epipaleolithic (3A) and Solutrean (3B).
Layer 4	Identical to layer 3 but separated by the presence of a gravel level; contains sedimentary lateral variations, marked by different intensity of sediment compactation and/or concentration of organic materials (4B, 4C, 4D, 4E); identified two different cultural horizons of Solutrean and Proto-Solutrean chronology.
Layer 5	Silt and clay matrix sediment with a heavy presence of organic elements, such as small, medium and large faunal remains (frequently calcinated), which gives this layer a dark color.
Layer 6	Silt and clay matrix sediment with a heavy presence of organic elements, such as small, medium and large faunal remains (frequently calcinated), which gives this layer a dark color; presence of bigger quantity of small and medium sized limestone clasts.

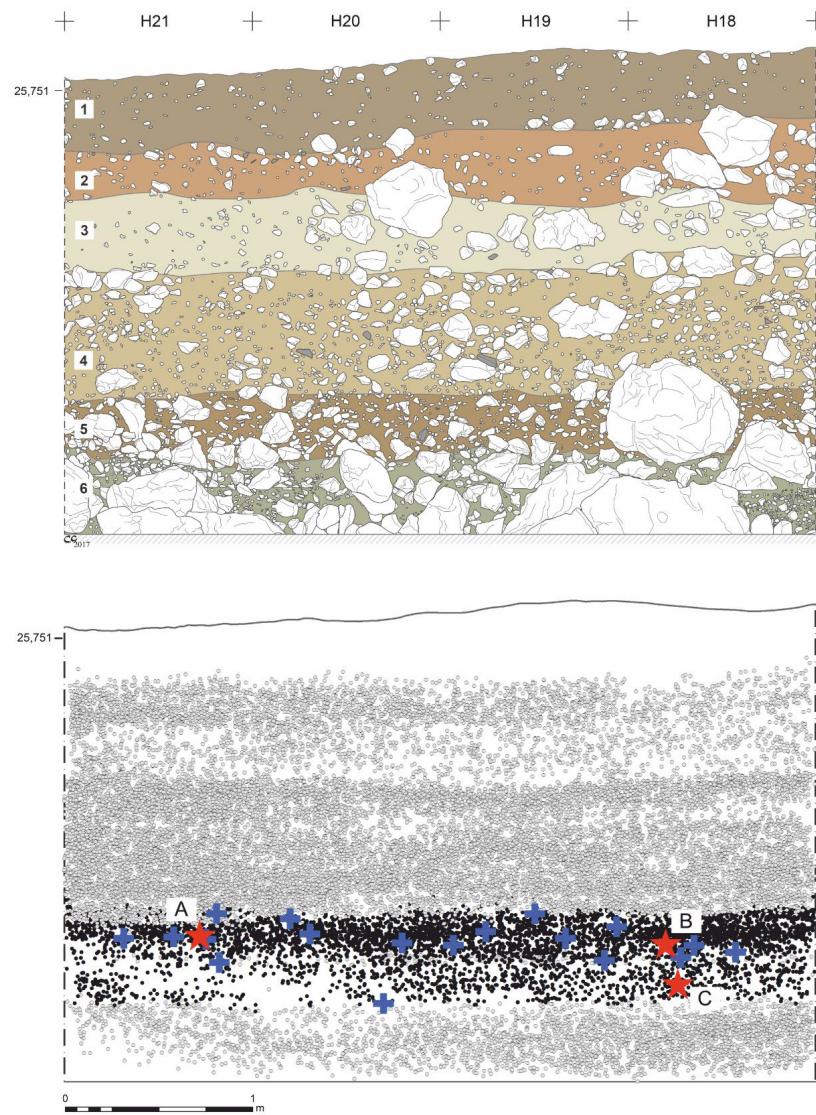

Figure 4: East profile stratigraphy in the Terrace area (above) and distribution of all tridimensionally coordinated lithics in the new excavation area until 2017 (under). Lithis from layers 4E and 5 are coloured in black. Blue crosses represent dolerite artefacts and stars mark the provenance of each radiocarbon date: A - WK-42830; B - WK-42831; C - WK-44416.

Figure 9: Lapa do Picareiro. Location.

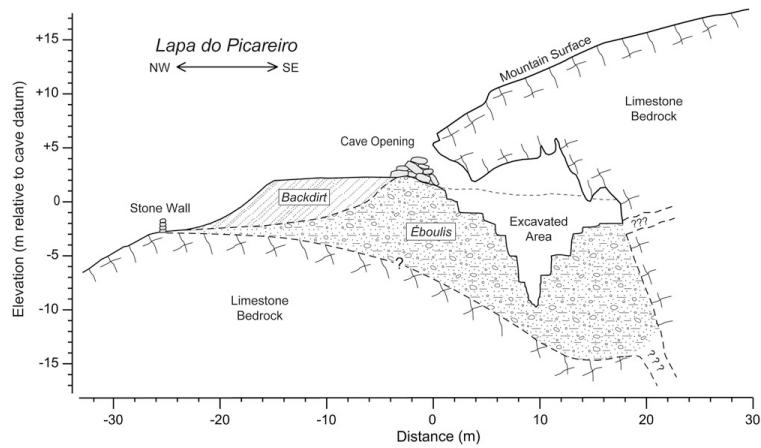

Figure 10: Lapa do Picareiro. Generalized cross section showing surface topography, shape of the cave, and area excavated into sedimentary fill. After Benedetti et al. (2019).

Table 19: Lapa do Picareiro identified layers with sediment description and associated cultural horizons, whenever existent. After Benedetti et al. (2019).

<b>Zone</b>	<b>Level</b>	<b>Depth interval (mbd)</b>	<b>Matrix color (Munsell)</b>	<b>Sediment description a, b, c</b>	<b>Lithic assemblage</b>
1	D	0.87–1.12	Brown (10YR5/3)	Medium clasts in very muddy matrix, friable to slightly hard, common fine charcoal and bone fragments, chalky appearance	Epipaleolithic
	E	1.12–1.86	Grayish brown(10YR5/2)	Small to medium clasts in very muddy matrix, friable to slightly hard, abundant charcoal and bone fragments, chalky appearance	Late Magdalenian
	F	1.86–2.17	Dark grayish brown (10YR4/2)	Medium to large clasts with little fine sediment, loose, muddy dark brown lenses with abundant charcoal and bone fragments	Late Magdalenian
	I	2.17–2.37	Light yellowish brown (10YR6/4)	Large to very large clasts with very little fine sediment, loose to friable, few bones	Late Magdalenian
	J	2.37–2.55	Yellowish brown (10YR5/4)	Medium to large clasts with very little fine sediment, loose, few bones	Late Magdalenian
	K	2.55–2.75	Strong brown (7.5YR5/6)	Small clasts, friable, few bones	Early Magdalenian
	L	2.75–3.13	Strong brown (7.5YR5/6)	Small to medium clasts in muddy matrix, friable to slightly hard, few bones and fragments, few boulders up to 100<U+2009>cm	Early Magdalenian
	M	3.13–3.19	Strong brown (7.5YR5/6)	Very small clasts in muddy matrix, friable	None
	N	3.19–3.53	Strong brown (7.5YR4/6)	Medium to large clasts, loose to friable, common medium-large bones and bone fragments	None
	O	3.53–3.81	Strong brown (7.5YR4/6)	Medium clasts, friable, common charcoal, and bones	Solutrean
2	P	3.81–3.93	Brown (7.5YR4/4)	Medium to large clasts, loose to friable	None
	R	3.93–4.01	Brown (7.5YR5/4)	Small to medium clasts, friable, common charcoal, and small bones	Solutrean
	S	4.01–4.13	Light brown (7.5YR6/4)	Small clasts, friable, common charcoal, and bones	Solutrean
	T	4.13–4.86	Strong brown (7.5YR4/6)	Medium to large clasts, friable, common boulders up to 80<U+2009>cm, muddy in lower half with abundant charcoal and bones	Solutrean and Proto-Solutrean

Table 19: Lapa do Picareiro identified layers with sediment description and associated cultural horizons, whenever existent. After Benedetti et al. (2019). (*continued*)

<b>Zone</b>	<b>Level</b>	<b>Depth interval (mbd)</b>	<b>Matrix color (Munsell)</b>	<b>Sediment description a, b, c</b>	<b>Lithic assemblage</b>
3	U	4.86–5.02	Strong brown (7.5YR5/6)	Small to medium clasts in muddy matrix, friable, includes lenses with abundant small animal bones and bone fragments	Terminal Gravettian
	V	5.02–5.12	Strong brown (7.5YR5/6)	Medium to large clasts, little fine sediment, loose to friable, abundant small animal bones	Gravettian
	W	5.12–5.25	Strong brown (7.5YR4/6)	Small to medium clasts in very muddy matrix, friable to slightly hard, abundant small animal bones and bone fragments	Gravettian
	X	5.25–5.32	Strong brown (7.5YR5/6)	Medium clasts, little fine sediment, friable, abundant small animal bones	Gravettian
	Y	5.32–5.53	Strong brown (7.5YR5/6)	Medium to large clasts, little fine sediment, common bones	None
	Z	5.53–5.71	Strong brown (7.5YR5/6)	Medium clasts in muddy matrix, friable, common bones	None
	BB	5.71–5.96	Strong brown (7.5YR5/6)	Large clasts, friable, common bones, few boulders up to 60<U+2009>cm	Early Upper Paleolithic
	CC	5.96–6.03	Strong brown (7.5YR5/6)	Very small clasts, friable	None
	DD	6.03–6.14	Strong brown (7.5YR4/6)	Medium clasts in very muddy matrix, slightly to moderately hard	Early Upper Paleolithic
	EE	6.14–6.27	Reddish brown (5YR4/4)	Small clasts in muddy matrix, friable to slightly hard, common bones	None
	FF	6.27–6.45	Dark reddish brown (5YR3/4)	Medium clasts, slightly to moderately hard, abundant charcoal and bones	Early Upper and/or Middle Paleolithic
4	GG	6.45–6.62	Strong brown (7.5YR5/6)	Large clasts, extremely hard, cemented by calcite crystals filling voids, common bones, and bone fragments	Aurignacian
	HH	6.62–6.76	Strong brown (7.5YR4/6)	Medium clasts in muddy matrix, slightly hard, common bones	Aurignacian
	II	6.76–6.87	Strong brown (7.5YR5/6)	Medium to large clasts in muddy matrix, very hard, calcite cement filling voids	Aurignacian

Table 19: Lapa do Picareiro identified layers with sediment description and associated cultural horizons, whenever existent. After Benedetti et al. (2019). (*continued*)

<b>Zone</b>	<b>Level</b>	<b>Depth interval (mbd)</b>	<b>Matrix color (Munsell)</b>	<b>Sediment description a, b, c</b>	<b>Lithic assemblage</b>
5	JJ (upper)	6.87–7.73	Reddish brown (5YR4/4)	Medium to large clasts in muddy matrix, slightly hard, common bones; up to 20<U+2009>cm thick lenses of dark reddish brown fine sediment with dispersed charcoal	Mousterian
	JJ (lower)	7.73–8.35	Reddish brown (5YR4/4)	Medium clasts in very muddy matrix, slightly hard, lenses of dark reddish-brown fine sediment with dispersed charcoal and large animal bones	Mousterian
	KK	8.35–8.64	Yellowish red (5YR5/8)	Medium to large clasts, slightly to moderately hard, few bones	None
	LL	8.64–9.15	Reddish brown (5YR4/4)	Large clasts, slightly hard, concentration of angular boulders up to 60<U+2009>cm in lower part	None
	MM	9.15–9.98	Reddish brown (5YR5/4)	Medium to large clasts in muddy matrix, moderately hard, few small animal bones	None
	NN	9.98–10.62	Reddish brown (5YR5/4)	Very large clasts and boulders up to 70<U+2009>cm in muddy matrix, slightly hard, few bones	None
