| S8 | Lapa do Picareiro. Flake elongation and flattening by phase and raw material | 37 |

Table S1: Data Dictionary with variables considered in the attributes analysis, including measurement units, allowed vallued, definitions and/or references.

| Variable | Measurement units | Allowed values | Description |
|--------------------------------|-------------------|--|---|
| ID | Numeric | - | ID number assigned to the piece. |
| Raw material | - | Chert, Quartz, Greywacke, Chalcedony, Schist, Silcrete, Dolerite, Other. | Type of raw material of the piece. |
| Quartz quality | - | Coarse, Medium, Fine, Rock crystal. | Type of grain and quality of quartz. Coarse quality: large and visible grains (>0.5 mm). Medium quality: small visible grains. Fine quality: absence of visible grains. Rock crystal: absence of visible grains and transparent coloration. |
| Class | _ | Blank, Blank fragment, Retouched piece, Retouched piece fragment, Core, Core fragment, Core preparation product, Core preparation product fragment, Burin spall, Thinn flake, Thinn flake fragment, Anvil, Hammer, Manuport, Shatter, Chip. | Technological class of the piece. According to Andrefsky (1998), Bicho (2011), Debenath and Dibble (1994), Inizan et al. (1999). |
| Core preparation product | - | Crested piece, Core trim, Core tablet, Core front. | Type of core preparation product. According to Inizan et al. (1999). |
| Retouched piece blank | - | Flake, Elonged blank, Shatter, Other, Indeterminate. | Type of retouched piece blank. According to Inizan et al (1999). |
| Piece completeness | - | Proximal, Distal, Other. | Part of the piece that is present. Proximal refers to the part which has a bulb and a striking platform; distal is the end of the piece; other refers to mesial. |
| Cortex | - | 0%, 1-30%, 31-60%, 61-99%, 100%. | Percentage of cortex presence in the dorsal face of the piece. According to Andrefsky (2005, pp. 104-105) and Bicho (2011). |
| Cortex location | _ | Proximal, Distal, Mesial, Left lateral, Right lateral, Proximal left lateral, Proximal right lateral, Distal left lateral, Distal right lateral, Mesial left lateral, Mesial right lateral. | Location of cortex in the dorsal surface of the piece. |
| Cortex type | - | Cobble, Outcrop, Indeterminate. | Type of cortex present on the piece. Cobble refers to rounded clasts of rock; Outcrop is an exposed bedrock or superficial deposits. |
| Platform type | - | Plain, Dihedral, Faceted, Punctiform, Linear, Winged, Removed, Crushed, Other. | Type of platform. According to Inizan et al (1999, pp. 136). |

4

Table S1: Data Dictionary with variables considered in the attributes analysis, including measurement units, allowed vallued, definitions and/or references. (continued)

| Variable | Measurement units | Allowed values | Description |
|-------------------------|-------------------|---|---|
| Platform cortex | - | No, Yes complete, Yes partial. | Presence of cortex on the platform. |
| Lipping | - | No, Yes. | Presence of a lip on the piece. According to Inizan et al (1999, pp. 144). |
| Blank shape | - | Parallel, Convergent, Divergent, Biconvex, Irregular, Circular, Dejete, Other. | Type of blank shape. According to Almeida (2000, pp. 107). |
| Cross section | - | Triangular, Trapezoidal, Quadrangular, Irregular, Lenticular, Other. | Type of cross section of the piece. According to Scerri et al (2015, pp. 19). |
| Blank tip | - | Feather, Hinge, Step, Overshoot, Pointed. | Type of blank tip. According to Almeida (2000, pp. 106). |
| Profile | - | Straight, Curved, Twisted, Irregular. | Type of blank profile. According to Almeida (2000, pp. 106). |
| Scar count | Numeric | NA | Count of dorsal flake scars over 5 mm. According to Andrefsk (2005, pp. 106). |
| Scar pattern | - | Unidirectional, Bidirectional, Crossed, Sub-centripedal, Centripedal, Other. | Type of scar pattern on the dorsal surface of the piece. According to Scerri et al (2015, pp. 19). |
| Thickness | In mm | - | Measurement of piece maximum thickness. |
| Max width | In mm | - | Measurement of piece maximum width. |
| Proximal width | In mm | - | Measurement of piece proximal width. |
| Mesial width | In mm | - | Measurement of piece mesial width. |
| Distal width | In mm | - | Measurement of piece distal width. |
| Length | In mm | - | Measurement of piece central length according to the technological axis. |
| Platform thickness | In mm | - | Measurement of platform central thickness. |
| Platform width | In mm | - | Measurement of platform central width. |
| Weight | In grams | - | Weight measurement of piece. |
| Exterior platform angle | In degrees | - | Measurement of the angle between the platform and the dorsa surface of the piece. According to Dibble (1997). |

Table S1: Data Dictionary with variables considered in the attributes analysis, including measurement units, allowed vallued, definitions and/or references. (continued)

| Variable | Measurement units | Allowed values | Description |
|--------------------------------|-------------------|---|---|
| Core type | - | Single platform, Single prismatic, Single pyramidal, Two single platforms, Opposed, Opposed twisted, Other opposed, Orthogonal, Inform, Bipolar, Globular, Centripedal, Discoidal, Levallois, Chopper, Tested, Other. | Type of core. According to Zilhao (1997, pp. 17). |
| Core Cross Section | - | Circular, Triangular, Quadrangular, Irregular. | Type of core cross section. |
| Number of core faces | - | One, Two, Three, Four, More than four. | Count of core debitage surfaces. |
| Core platform | - | Plain, Dihedral, Faceted, Cortical, Crushed, Other. | Type of core platform. According to Inizan et al (1999, pp. 136). |
| Main face cortex | - | 0%, 1-30%, 31-60%, 61-99%. | Percentage of cortex of the main face. Main face refers to the debitage surface with most scars. |
| Main face scar count | Numeric | - | Count of scars over 5 mm in the main face of the core. |
| Main face scar direction | - | Unidirectional, Bidirectional opposed, Bidirectional alternate, Crossed, Sub-centripedal, Centripedal, Other. | Direction of scars in the main face of the core. According to Scerri et al (2015, pp. 19). |
| Main face aris orientation | - | Parallel, Convergent, Indeterminate. | Orientation of main face aris. |
| Main face scar length | In mm | - | Central length measurement of the last scar, over 5 mm, in the main face of the core. |
| Main face scar width | In mm | - | Maximum width measurement of the last scar, over 5 mm, in the main face of the core. |
| Main face platform angle | In degrees | - | Measurement of the angle between the platform and the main face of the core. |
| Main face core use | - | Flakes, Blades, Bladelets, Points, Mixed. | Type of products extracted from the main face of the core. Distinction of blade and bladelet according to Tixier (1963). |
| Alteration | - | None, Patinated, Concretion, Fire, Mix. | Type of alteration of the piece. Patina refers to a layer covering the surface of a piece; concretion is a mass of mineral formed around a nucleus. |
| Fire | - | Burned, Rubefact, Heat treatment. | Type of fire alteration to the piece. According to Inizan et al (1999, pp. 24). |

Table S1: Data Dictionary with variables considered in the attributes analysis, including measurement units, allowed vallued, definitions and/or references. (continued)

| Variable | Measurement units | Allowed values | Description |
|--|-------------------|----------------|--|
| Retouched piece typology Chip quantity | - Numeric | - | Retouched piece typology as defined by Sonneville-Bordes and Perrot (1956), adapted by Zilhao (1997) for the Portuguese Estremadura. Count of chips. According to Andrefsky (2005, pp. 12). |
| Other notes | - | - | NA |

Table S2: Vale Boi. Terrace identified layers with sediment description.

| Layer | Description |
|---------|--|
| Layer 1 | Reddish dark brown silt/clay matrix sediment, with a granulous texture, possibly disturbed by agricultural processes; ceramics until 30 cm depth, immediately above the transition between layer 1 and 2. |
| Layer 2 | Dark sediment, more compact and with a heavier clay-like component; has a thickness of 25-30 cm and is well preserved; bones and ceramics are often in connection, with restricted spatial distributions; the limestone blocks correlate with the antropical structures dug in 2004; where the level with a Neolithic occupation has been identified. |
| Layer 3 | Silt and clay matrix sediment, with some inclusions, mostly small limestone clasts; this layer is often interrupted by the deposition of levels of clasts with different sizes; presence of lithic artefacts and fauna is constant in all of the deposit, though it is possible to identify two different cultural horizons: Epipaleolithic (3A) and Solutrean (3B). |
| Layer 4 | Identical to layer 3 but separated by the presence of a gravel level; contains sedimentary lateral variations, marked by different intensity of sediment compactation and/or concentration of organic materials (4B, 4C, 4D, 4E); identified two different cultural horizons of Solutrean and Proto-Solutrean chronology. |
| Layer 5 | Silt and clay matrix sediment with a heavy presence of organic elements, such as small, medium and large faunal remains (frequently calcinated), which gives this layer a dark color. |
| Layer 6 | Silt and clay matrix sediment with a heavy presence of organic elements, such as small, medium and large faunal remains (frequently calcinated), which gives this layer a dark color; presence of bigger quantity of small and medium sized limestone clasts. |

Table S3: Summary of radiocarbon dates from Portuguese Proto-Solutrean. Adapted from Zilhão (1997), Cascalheira and Bicho (2013), Belmiro (2018) and Benedetti et al. (2019). Calibration curves are Int-Call3 and Marinel3, using OxCal 4.1.7 (online).

| Zone | Level | Depth interval (mbd) | Matrix color (Munsell) | Sediment description a, b, c | Lithic assemblage |
|------|-------|----------------------|------------------------------------|--|----------------------------------|
| 1 | D | 0.87–1.12 | Brown (10YR5/3) | Medium clasts in very muddy matrix, friable to slightly hard, common fine charcoal and bone fragments, chalky appearance | Epipaleolithic |
| | Е | 1.12–1.86 | Grayish brown $(10 \text{YR} 5/2)$ | Small to medium clasts in very muddy matrix, friable to slightly hard, abundant charcoal and bone fragments, chalky appearance | Late Magdalenian |
| | F | 1.86-2.17 | Dark grayish brown $(10YR4/2)$ | Medium to large clasts with little fine sediment, loose, muddy dark brown lenses with abundant charcoal and bone fragments | Late Magdalenian |
| | I | 2.17 – 2.37 | Light yellowish brown (10YR6/4) | Large to very large clasts with very little fine sediment, loose to friable, few bones | Late Magdalenian |
| | J | 2.37 – 2.55 | Yellowish brown (10YR5/4) | Medium to large clasts with very little fine sediment, loose, few bones | Late Magdalenian |
| 2 | K | 2.55 – 2.75 | Strong brown (7.5YR5/6) | Small clasts, friable, few bones | Early Magdalenian |
| | L | 2.75-3.13 | Strong brown (7.5YR5/6) | Small to medium clasts in muddy matrix, friable to slightly hard, few bones and fragments, few boulders up to $100 < U+2009 > cm$ | Early Magdalenian |
| | M | 3.13-3.19 | Strong brown (7.5YR5/6) | Very small clasts in muddy matrix, friable | None |
| | N | 3.19–3.53 | Strong brown (7.5YR4/6) | Medium to large clasts, loose to friable, common medium-large bones and bone fragments | None |
| | О | 3.53–3.81 | Strong brown (7.5YR4/6) | Medium clasts, friable, common charcoal, and bones | Solutrean |
| | Р | 3.81 – 3.93 | Brown (7.5YR4/4) | Medium to large clasts, loose to friable | None |
| | R | 3.93-4.01 | Brown $(7.5YR5/4)$ | Small to medium clasts, friable, common charcoal, and small bones | Solutrean |
| | S | 4.01–4.13 | Light brown (7.5YR6/4) | Small clasts, friable, common charcoal, and bones | Solutrean |
| | Т | 4.13-4.86 | Strong brown (7.5YR4/6) | Medium to large clasts, friable, common boulders up to $80 < U + 2009 > cm$, muddy in lower half with abundant charcoal and bones | Solutrean and Proto-Solutrean |

Table S16: Lapa do Picareiro identified layers with sediment description and associated cultural horizons, whenever existent. After Benedetti et al. (2019). *(continued)*

| Zone | Level | Depth interval (mbd) | Matrix color (Munsell) | Sediment description a, b, c | Lithic assemblage |
|------|-------|----------------------------|-----------------------------|---|--|
| 3 | U | 4.86-5.02 | Strong brown (7.5YR5/6) | Small to medium clasts in muddy matrix, friable, includes lenses with abundant small animal bones and bone fragments | Terminal Gravettian |
| | V | 5.02 – 5.12 | Strong brown (7.5YR5/6) | Medium to large clasts, little fine sediment, loose to friable, abundant small animal bones | Gravettian |
| | W | 5.12-5.25 | Strong brown (7.5YR4/6) | Small to medium clasts in very muddy matrix, friable to slightly hard, abundant small animal bones and bone fragments | Gravettian |
| | X | 5.25 – 5.32 | Strong brown (7.5YR5/6) | Medium clasts, little fine sediment, friable, abundant small animal bones | Gravettian |
| | Y | 5.32 – 5.53 | Strong brown (7.5YR5/6) | Medium to large clasts, little fine sediment, common bones | None |
| | Z | 5.53–5.71 | Strong brown (7.5YR5/6) | Medium clasts in muddy matrix, friable, common bones | None |
| | ВВ | 5.71 – 5.96 | Strong brown (7.5YR5/6) | Large clasts, friable, common bones, few boulders up to $60 < U + 2009 > cm$ | Early Upper Paleolithic |
| | CC | 5.96 – 6.03 | Strong brown (7.5YR5/6) | Very small clasts, friable | None |
| | DD | 6.03 – 6.14 | Strong brown (7.5YR4/6) | Medium clasts in very muddy matrix, slightly to moderately hard | Early Upper Paleolithic |
| | EE | 6.14 – 6.27 | Reddish brown (5YR4/4) | Small clasts in muddy matrix, friable to slightly hard, common bones | None |
| | FF | 6.27 – 6.45 | Dark reddish brown (5YR3/4) | Medium clasts, slightly to moderately hard, abundant charcoal and bones | Early Upper and/or Middle Paleolithic |
| 4 | GG | 6.45-6.62 | Strong brown (7.5YR5/6) | Large clasts, extremely hard, cemented by calcite crystals filling voids, common bones, and bone fragments | Aurignacian |
| | НН | 6.62 – 6.76 | Strong brown (7.5YR4/6) | Medium clasts in muddy matrix, slightly hard, common bones | Aurignacian |
| | II | 6.76 – 6.87 | Strong brown (7.5YR5/6) | Medium to large clasts in muddy matrix, very hard, calcite cement filling voids | Aurignacian |

Table S16: Lapa do Picareiro identified layers with sediment description and associated cultural horizons, whenever existent. After Benedetti et al. (2019). *(continued)*

| Zone | Level | Depth interval (mbd) | Matrix color (Munsell) | Sediment description a, b, c | Lithic assemblage |
|------|--------------------|----------------------------|--------------------------|--|-------------------|
| | JJ (up- per) | 6.87-7.73 | Reddish brown (5YR4/4) | Medium to large clasts in muddy matrix, slightly hard, common bones; up to 20 <u+2009>cm thick lenses of dark reddish brown fine sediment with dispersed charcoal</u+2009> | Mousterian |
| 5 | JJ (lower) | 7.73–8.35 | Reddish brown $(5YR4/4)$ | Medium clasts in very muddy matrix, slightly hard, lenses of dark reddish-brown fine sediment with dispersed charcoal and large animal bones | Mousterian |
| | KK | 8.35-8.64 | Yellowish red (5YR5/8) | Medium to large clasts, slightly to moderately hard, few bones | None |
| | LL | 8.64-9.15 | Reddish brown (5YR4/4) | Large clasts, slightly hard, concentration of angular boulders up to 60 <u+2009>cm in lower part</u+2009> | None |
| | MM | 9.15 – 9.98 | Reddish brown (5YR5/4) | Medium to large clasts in muddy matrix, moderately hard, few small animal bones | None |
| | NN | 9.98–10.62 | Reddish brown (5YR5/4) | Very large clasts and boulders up to $70 < U + 2009 > cm$ in muddy matrix, slightly hard, few bones | None |

Table S27: Lapa do Picareiro - U/Lower T - mean and standard deviation of elongated blanks measurements (in mm).

| Measurements | Quartz | Chert |
|-------------------------------|-------------|-------------|
| MaxWidth, M (SD) | 7.9 (4.7) | 11.9 (7.6) |
| Length, M (SD) | 17.5(9.0) | 32.3(17.5) |
| Thickness, M (SD) | 3.17(3.58) | 3.54(2.81) |
| PlatformWidth, M (SD) | 4.77(1.43) | 7.66(5.57) |
| PlatformThickness, M (SD) | 2.48(2.94) | 3.04(2.52) |
| ExteriorPlatformAngle, M (SD) | 68.3 (47.6) | 74.1 (45.0) |

Table S28: Lapa do Picareiro - Middle T - mean and standard deviation of elongated blanks measurements (in mm).

| Measurements | Quartz | Chert |
|----------------------------------|---------------------------|----------------------------|
| MaxWidth, M (SD) | 7.7 (1.5) | 14.0 (7.8) |
| Length, M (SD) Thickness, M (SD) | 17.0 (2.9) 2.16 (0.69) | 37.5 (16.5) 4.20 (2.36) |
| PlatformWidth, M (SD) | 5.51 (1.67) | 9.04 (4.26) |
| PlatformThickness, M (SD) | 2.07 (0.58) | 3.29 (2.39) |
| ExteriorPlatformAngle, M (SD) | 92.8 (8.9) | 64.0 (44.1) |
